Profile

Computer Science undergraduate specializing in Cloud Computing and Automation, with hands-on experience in AWS cloud infrastructure, cloud automation, and DevOps practices. Experienced with AWS services and Infrastructure as Code using CloudFormation, with practical development in Docker, CI/CD, and Kubernetes through cloud projects. Interested in building scalable, automated, and reliable cloud infrastructure.

Education

Vellore Institute Of Technology <i>B.Tech in Computer Science and Engineering (Cloud Computing and Automation)</i>	2023 – 2027 <i>Bhopal, India</i>
Ryan International School <i>CBSE</i>	2023 <i>Ghaziabad, India</i>

Experience

Defence Research and Development Organisation (DRDO) <i>Research Trainee</i>	May 2026 – July 2026 <i>New Delhi, India</i>
--	--

- Worked on privacy-preserving computing with a focus on **Homomorphic Encryption** and the **BGV encryption scheme**.
- Studied and implemented core components of the BGV scheme, including encrypted computation and ciphertext processing.
- Explored the application of Homomorphic Encryption to secure computation and privacy-preserving data analytics in cloud environments.
- Investigated the integration of secure computation with distributed systems and technologies such as Apache Kafka.

Projects

AWS Cloud Infrastructure	<i>AWS — CloudFormation — EC2 — IAM — VPC</i>
---------------------------------	---

- Designed and deployed AWS cloud infrastructure using **EC2, VPC, IAM, and CloudFormation**, focusing on structured and repeatable resource provisioning.
- Automated infrastructure deployment using **AWS CloudFormation**, reducing manual configuration and improving consistency across cloud resources.
- Configured network and access components with an emphasis on understanding cloud networking, resource isolation, and controlled permissions.

MediDoc – Healthcare Web Platform	<i>Web Application — Cloud Architecture</i>
--	---

- Developed a healthcare-oriented web platform designed to streamline interaction between patients and healthcare services through a centralized application.
- Designed the application with a **cloud-ready architecture**, considering scalable application services, data management, and reliable deployment.
- Applied software development and system-design concepts to structure the platform for future integration with **AWS cloud services** and scalable backend components.

AI-Driven Virtual Interview Assistant	<i>AI — Web Application — Cloud</i>
--	-------------------------------------

- Developed a web-based virtual interview platform designed to simulate structured interviews and provide an interactive experience for candidates.
- Integrated AI-driven functionality to support automated interview interactions and assist with evaluating candidate responses.
- Designed the application with a **cloud-oriented deployment** approach, considering scalable services and reliable integration between application components.

Technical Skills

Cloud	AWS, AWS CloudFormation, EC2, S3, VPC, IAM
Programming	Python, C++, Java
DevOps	Linux, Docker, CI/CD, Terraform, Kubernetes
Networking	TCP/IP, DNS, HTTP/HTTPS, Networking Fundamentals
Tools	Git, GitHub, VS Code

Certifications

- Google IT Support Professional Certificate
- The Bits and Bytes of Computer Networking (Google)
